

Q InStore Radio

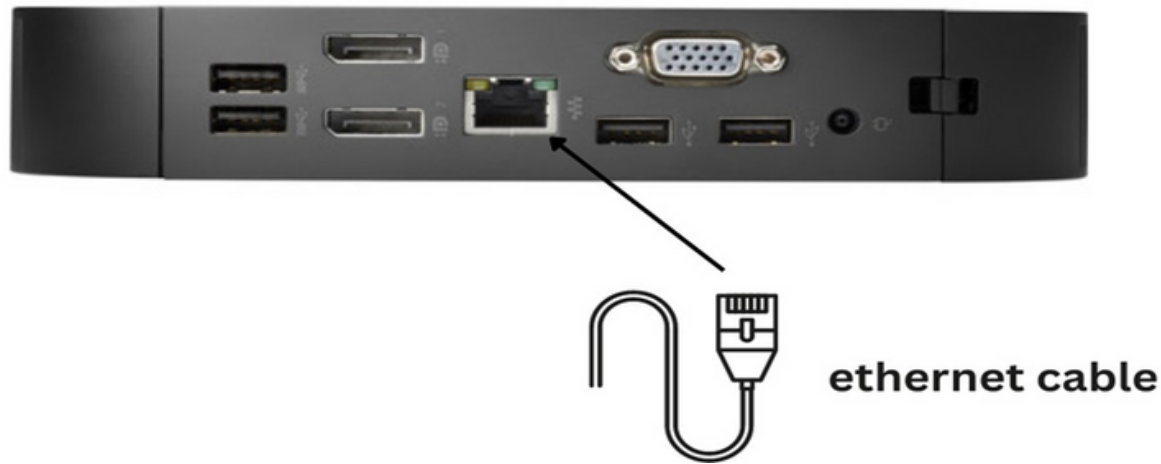

I. Set Up Your MusicBOX

! Once the QinStore Radio equipment arrives at the location after delivery, it should remain unused for at least 30 minutes to adapt to the ambient temperature

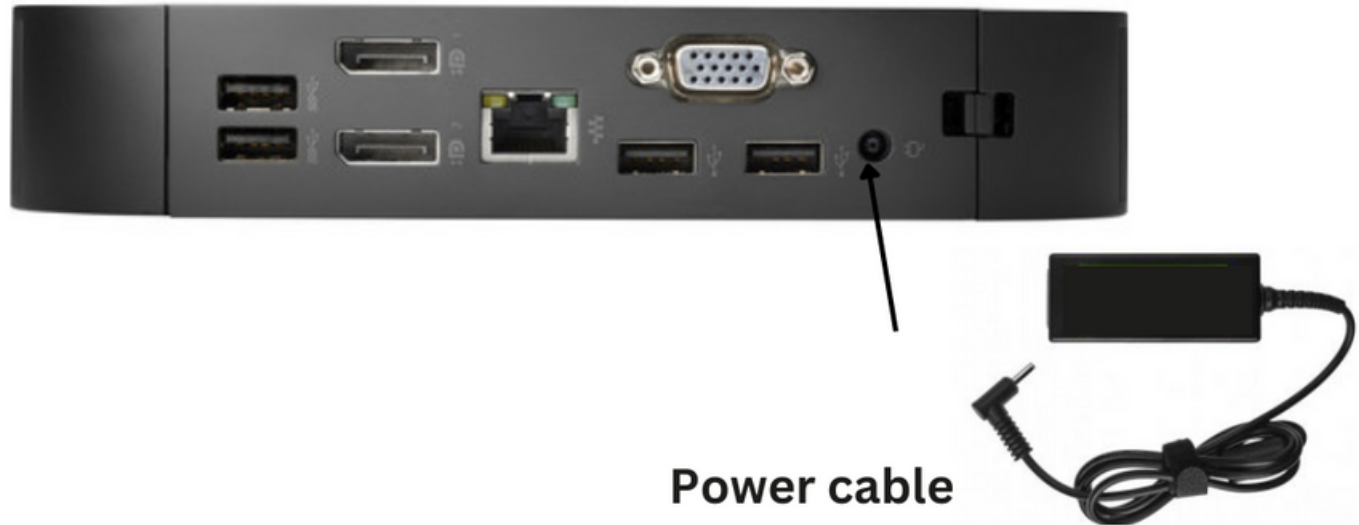

a. Connection to the location's amplification system, LINE input, is done using a standard cable with a 3.5 mm JACK plug, male, stereo.

b. Then connect the Ethernet cable to ensure the equipment's internet access.

c. Only use the power source provided by the manufacturer; using other means is prohibited.

II. Operating the Equipment Start-up

The QinStore Radio equipment is connected to the power source, after which it automatically starts and plays music in about 3 minutes. The Power ON button can also be used if the device does not start when connected to the power source.

Shutting down: Press the Power ON button for 3-4 seconds, wait until the On/Off LED stops illuminating.

III. Updating Audio Content

Music and audio recordings are automatically synchronized via the internet. The chosen audio stream is accessed when the dedicated software installed in the audio playback device, requiring a guaranteed internet bandwidth of at least 128 kbps. When updates to audio content and new audio recordings are made, the internet bandwidth used by the application increases to up to 500 kbps.

IV. PRECAUTIONS

The equipment's ventilation slots must remain unblocked; otherwise, the equipment is at risk of damage due to overheating. Do not place the equipment in a closed area without ventilation, do not cover it with other devices, fabrics, folders, paper sheets. Around the equipment, there should be a 20cm space for free ventilation.
